Note: See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

(NA) Not available.

¹For intercensal years, annual survey of manufactures (ASM) data are shown. These data are estimates based on a representative sample of establishments canvassed annually and may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the Annual Survey of Manufactures volume. Data prior to 1958 appear in Volume III, 1963 Census of Manufactures, in table 2 of the chapter devoted to this State.

²Does not include central administrative offices and auxiliaries.

³The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

⁴The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Historical data prior to 1972 are based on prior census-year definitions.

- Represents zero.

¹The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments.

TABLE 4. General Statistics for Standard Metropolitan Statistical Areas, Counties, and Selected Cities: 1972 and 1967—Continued

(Footnotes for table 4)

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition. Comparable 1967 data are not available.

²The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

--	ADMINISTRATIVE AND AUXILIARY.	200	77	12.9	155.8	-	-	-	-	-	-	-	8.1	-

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹General statistics for some producing area are withheld to avoid disclosing figures for individual companies. However, for such areas with 150 employees or more, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA--150 to 249 employees BB--250 to 499 employees CC--500 to 999 employees EE--1,000 to 2,499 employees FF--2,500 employees and over

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where establishments records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

See appendix B for definitions of Standard Metropolitan Statistical Areas (SMSA) in this State.

- Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by more than 5 percent from 1972 data tabulated under the old definition. Comparable 1967 data are not available.

²The definition of this standard metropolitan statistical area has been revised for 1972. Data tabulated under the new 1972 definition differ by 5 percent or less from 1972 data tabulated under the old definition. Data for 1967 are based on prior census-year definitions.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

(NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

¹Data for counties that are coextensive with Standard Metropolitan Statistical Areas (SMSA) are shown in the SMSA table.

Note: The payroll and sales data for small establishments (generally single-unit companies with less than 10 employees) were obtained from administrative records of other government agencies instead of from a census report form. These data were then used in conjunction with industry averages to estimate the balance of the items shown in the table for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at the time the data were tabulated. The following symbols are shown where administrative records data were used and account for 10 percent or more of the figures shown:

E1--10 to 19 percent E3--30 to 39 percent E5--50 to 59 percent E7--70 to 79 percent E9--90 to 99 percent
 E2--20 to 29 percent E4--40 to 49 percent E6--60 to 69 percent E8--80 to 89 percent E0--100 percent

- Represents zero. (NA) Not available. (0) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

TABLE 9. Distribution of Establishments, by Employment Size Class and Major Industry Group, for Counties: 1972—Continued
